

JISUN LEE

Email: jisun.lee@austin.utexas.edu | Webpage: <https://jsl0713.github.io/>

ACADEMIC EXPERIENCE	Assistant Professor University of Texas, Austin, TX, USA Operations Research & Industrial Engineering	August 2026 - present
	Postdoctoral Fellow Georgia Institute of Technology, GA, USA H. Milton Stewart School of Industrial & Systems Engineering	August 2025 - August 2026

EDUCATION	Ph.D., University of California, Berkeley, CA, USA Industrial Engineering & Operations Research	August 2020 - July 2025
	M.S., Seoul National University (SNU), Republic of Korea Industrial Engineering	August 2017 - August 2019
	B.S., Seoul National University (SNU), Republic of Korea Industrial Engineering	March 2013 - August 2017

PAPERS	Convexification of multi-period quadratic programs with indicators [link] Jisun Lee, Andrés Gómez, and Alper Atamtürk, Mathematical Programming, 2026.	
	Convexification of forbidden vertices problem Jisun Lee, Santanu Dey, and Oktay Günlük. (Working paper)	
	Multi-period quadratic programs with multiple switches Jisun Lee, Andrés Gómez, and Alper Atamtürk. (Working paper)	
	Finding diverse sets of ϵ-suboptimal solutions for mixed-integer programs [pdf] Jisun Lee, Ignacio Aravena Solís, Alper Atamtürk, and Jean-Paul Watson. (Working paper)	
	Strong formulations for hybrid affine system control Jisun Lee, Hyunki Im, and Alper Atamtürk. (under review)	
	A fully polynomial time approximation scheme for the probability maximizing shortest path problem [link] Jisun Lee, Seulgi Joung, and Kyungsik Lee, European Journal of Operational Research, 2022.	

TALKS	2026 INFORMS Optimization Society Conference , Atlanta, USA. - Toward the forbidden vertices with treewidth 3.	
	2025 INFORMS Annual Meeting , Atlanta, USA. - Multi-period quadratic programs with indicators.	
	2024 INFORMS Annual Meeting , Seattle, USA. [slides] - Convexification of multi-period mixed-integer quadratic optimization.	
	2024 Mixed Integer Programming Workshop , Kentucky, USA. [poster] - Strong formulation of hybrid control problem with tridiagonal inverse matrix.	
	2019 European Conference on Operational Research , Dublin, Ireland. [slides] - An approximation scheme of the probability maximizing combinatorial optimization problem.	
	2019 Conference of Korean Institute of Industrial Engineers , Seoul, Republic of Korea. - A fully polynomial time approximation scheme for the probability maximizing shortest path problem.	

PEER REVIEWING	Mathematical Programming, Integer Programming and Combinatorial Optimization, INFORMS Journal on Computing		
RESEARCH EXPERIENCE	Lawrence Livermore National Lab, CA, USA - Graduate student research intern	June 2024 - August 2024	
TEACHING (UC Berkeley)	IEOR 262A Mathematical Programming I IEOR 165 Engineering Statistics, Quality Control, and Forecasting IEOR 142 Introduction to Machine Learning and Data Analytics	Fall 2024 Spring 2024 Spring 2023	
RESEARCH INTEREST	Mixed-integer programming, combinatorial optimization Applications in statistical learning & hybrid system control Combined framework of optimization & machine learning Optimization under uncertainty: stochastic optimization, robust optimization
